Getting production data

GET /api/production/workbook

GET /api/production/sawlist

GET /api/production/glasslist

GET /api/production/frontview

...

...

The production api exposes a number of endpoint that provide data like geometries, models, lists etc. Check the OpenAPI swagger for the exact formats.

The project, suborder, frame etc. are targeted by query parameters:

- project

The project number or name
- suborder

The sub order index
- frame

The frame tag (merk)
- compartment

The compartment name (typically A, B, C etc)
- section

The section index (int)

Example of getting an svg of a compartment view
